Smart Manufacturing

DIF2017

- It is first innovation. Enter a new space, new business models, revolution, it is not improvement
- Product → Services
- Standardization is needed, exchange of data. Open.
- Open-source is the solution
- Use of 5G
- Collaboration: outside – inside. No isolation
- Security is critical, but solutions?... Security is not a show-stopper.
- Consider non-technological aspects (legal, ..)? When?
- Skills

DIF2017
